

## Blisters

Blisters are clear, raised thermoformed receptacles that contain one or several compartments to hold a number of products. These receptacles are applied to a paperboard backing or plastic back cards where there is room for design and your company logo. With our technology we can customize our blister trays to meet the size, shape and quantity of your product and will work with you to find the most attractive and practical design for your product.

## Blister Cards

Blister cards are the paperboard backing that the blister is attached to. These blister cards can display your company logo and other eye appealing designs to help enhance the attractiveness of your package to consumers.
