

Inventory Management

Blackbourn will plan and maintain inventory levels by SKU (stock-keeping unit). We have created pull-based inventory requirements based on actual customer demand via weekly reports. Blackbourn also manages inventory through regularly scheduled deliveries. This allows us to respond to unexpected demand through target inventory maintenance and to rely on our in-house stock to meet changing demands.

Blackbourn has a standard stock line of products available for general use. We can also set-up inventory programs for specific customers and parts based upon projected requirements via blanket orders.

Fulfillment

Blackbourn is dedicated to establishing an accurate, high-speed and reliable fulfillment of your new product or packaging line. We will customize any of our packaging products to meet each customer's specific criteria. We are constantly seeking new ways to improve your current packaging and its cost-effectiveness. Our commitment to fulfillment ensures quality, accuracy and speed to market in every product, providing our customers with outstanding product integrity.

Distribution

At Blackbourn we provide convenient same day shipping for all of our customers. Our in house assortment of stock allows us to meet the packaging demands of our clients if changes should occur.

Shrink Wrapping

Shrink wrapping is a method where a thin plastic film is shrunk around the given product. In order to use with clamshell packaging, the components will need to be fulfilled first. Blackbourn can offer this option to you to meet your final packaging requirements.

Prototyping

Prototyping provides designers, mold makers, and manufacturers with highly accurate prototype parts. This method is a proven way to reduce market time and development costs. At Blackburn, our team of professionals understand the manufacturing process from start to finish. With their expertise and training, they are able to offer you the best and most advanced prototype packaging. This means your packaging will get the maximum amount of precision and detail throughout the entire manufacturing process.

Packaging Design

Package design begins with a thorough evaluation of the product, starting with its size, weight, function and fragility. Our production team will work one on one with you to find the best packing design to meeting your products criteria. We combine quality and performance with all our designs and will work with you to customize your package the way you want it.
